

PLANTING BULLETIN

CONGRATULATIONS ON CHOOSING THE EXTRAORDINARY FLOWER CARPET ROSE!

Because Flower Carpet is so hardy, people everywhere have changed their ideas about how easy it is to grow a beautiful rose. Good preparation benefits all plants, however. Choose a location that is well drained, then prepare it following this simple guide.

Your Flower Carpet roses will grow quickly and delight you with long-lasting, beautiful color!

IMPORTANT

Flower Carpet will be growing actively on its own roots in the container. Plant out in your yard or garden within a few weeks or re-pot it into a container at least 16 inches wide.

LOCATION - SUN OR SEMI-SHADE

Flower Carpet should be in a highlighted location, exposed to 3-4 or more hours of sun (morning or afternoon) daily. Flower Carpet grows well in USDA zones 4-10. Protect in areas prone to intense heat or severe cold.

SOIL

Flower Carpet is not fussy. It thrives in nearly all soil types—from sand to clay.

COVERAGE

Allow 3 plants per square yard for good ground cover.

BORDERS

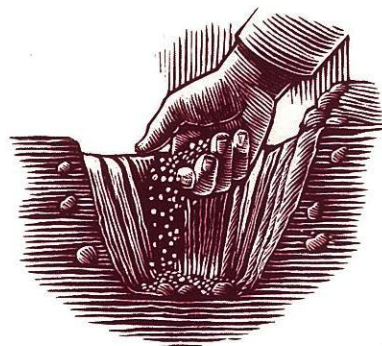

Plant 2 to 3 feet apart for a great hedge-like effect.

GARDEN

Dig a hole 12 inches deep and 12 inches wide. Work a handful of timed release fertilizer such as Sta-Green® into the soil. Water well.

CONTAINER OR HANGING BASKET

Select a container at least 16 inches wide. Using best quality mix, add a handful of timed release fertilizer such as Pursell's Sta-Green® six month rose food into the mix. Water well.

ADD FERTILIZER

MIX INTO SOIL
